

HIGH-FIDELITY PROTOTYPES & HEURISTIC TESTING

HIGH-FIDELITY PROTOTYPES: DRAFT #1

After receiving user feedback on our low-fi prototypes, Michael and I sat down and mapped out what we felt should be on each screen in order to optimize functionality of our application. Chris created the screens based on this outline. We then each went through screen-by-screen and conducted a heuristic evaluation based on Jakob Nielsen's 10 Usability Heuristics for UI Design.

TAKEAWAYS:

- No back arrows to navigate back to previous page
- Calendar and buttons are too small to utilize
- No sign up/forgot password buttons on login screen
- On specific event page, unclear what is a button and what is not
- No modal to confirm whether or not users actually want to sign out
- Search bar and chosen event page text is not easily visible
- Settings icon too hidden on side bar
- Font too small
